EDUCATION

Georgia Institute of Technology

Bachelor's Degree, Computer Science

Concentrations: Intelligence and Cybersecurity

Relevant Coursework: Object Oriented Programming, Data Structures and Algorithms, Computer Organization and Programming, Objects and Design, Discrete Mathematics, Linear Algebra, Intro to Artificial Intelligence, Robotics and Perception, Introduction to Human Dimension of Cybersecurity

Expected December 2026

Atlanta, GA

SKILLS

Languages: Java, Python, HTML, CSS, JavaScript, C, Assembly, SQL, TypeScript

Frameworks & Tools: FastAPI, Firebase, PostgreSQL, ReactJS, Next.js, Node.js, Figma, Git, Excel

Cloud & Practices: AWS, GCP, Docker, Agile Scrum, Auth (JWT, OAuth)

Machine Learning: Scikit-Learn, XGBoost, Gradient Boosting, Random Forest

Leadership & Communication: Toastmasters International Member (Dec 2023 – Present)

WORK EXPERIENCE

Zof AI

June 2025 – August 2025

Software Engineer Intern

- Shipped 5+ production features in a two-week cadence using **React/Next.js**, reducing onboarding time by **30%** and increasing engagement by **15%**.
- Owned end-to-end delivery (design → implementation → review → release), writing production-quality code with few iterations.
- Implemented **JWT** auth and CI/CD on AWS, enabling secure deploys and faster feedback cycles.
- Scoped tasks with PM/design; communicated tradeoffs and edge cases to unblock teammates.

Radical AI

May 2024 – July 2024

AI Engineer Intern

- Built and launched an LLM-backed quiz generator (**Streamlit**, **Vertex AI**) used by 200+ users; cut content creation time by **60%**.
- Integrated **ChromaDB** retrieval; improved response latency by **40%** under peak load via profiling and fixes.
- Deployed to **GCP** with service auth and logging/metrics for rapid iteration and safe rollouts.
- Authored deployment/scaling docs to standardize LLM workflows across the team.

PROJECTS

WealthScore

Next.js | TypeScript | OpenAI | Capital One API | React

- Developed a real-time financial analytics platform that processes live banking data with custom wealth scoring algorithms, improving user financial awareness by **65%** through the delivery of personalized insights and interactive dashboards.
- Built scalable RESTful APIs** using Next.js serverless functions, handling concurrent API calls to Capital One's Nessie banking API with **95% uptime**
- Integrated OpenAI GPT-3.5-turbo** to create an AI-powered financial assistant, providing personalized financial advice based on real transaction data.

ParkPlay

Node.js | Express | PostgreSQL | React | Docker

- Designed and deployed a scalable web application for public park court reservations, reducing manual administrative workload by **40%** and cutting search times by **50%**.
- Built RESTful APIs with **JWT-based authentication** and an **ACID-compliant PostgreSQL** schema using **Knex.js** to ensure reliable, concurrent reservation handling.
- Developed a responsive **React.js** frontend featuring **dynamic filtering**, a **cart-based booking system**.
- Containerized the application with **Docker**; conducted real-world testing with city staff and players to validate performance and usability.

Invest-igate

FastAPI | Scikit-Learn | XGBoost | PostgreSQL | Streamlit

- Developed an AI-powered financial assistant to provide actionable insights on spending habits, savings optimization, and investment strategies
- Built the backend using **FastAPI** and **PostgreSQL**, integrating machine learning models trained with **Scikit-Learn**, **XGBoost**, and **Stacking Regressor (Random Forest, Gradient Boosting, Lasso)** for income prediction
- Implemented **expense categorization**, **AI-powered income prediction**, and **interactive financial visualizations** to enhance user decision-making
- Utilized **Streamlit** to create an intuitive front-end, ensuring a seamless user experience for financial analysis
- Planned future enhancements including **real-time bank integrations**, **personalized investment plans**, and **financial goal tracking**
